

## **Clinical assessment of children with ADHD and related disorders**

Eric Taylor

*Institute of Psychiatry, Londra*

In this talk a structured diagnostic protocol for assessing ADHD will be presented. It is made of a semi-structured interview (CAPA), a set of questionnaires depending on the age of child: Conners Rating Scale, CBCL and ADD Brown Scales, and some crucial neuropsychological tests. Moreover, key information on differential diagnosis will be discussed related to comorbidity of ADHD: Learning Disability, Oppositional Defiant Disorder, Conduct Disorder, Mood and Anxiety Disorder.
